USER GUIDE

- **Home page:**
  When logged, it shows you the information about the logged user.
  It alerts the user if the convalidation of the grades of the last course have been granted.
  It also shows if the user has a pair and if it has been validated and it the student has a lab group or not.
  If there is not a user logged, it shows primary information.

- **Log-In:**
  Tab to log in when there is not a student logged.
  On the contrary, if a user is logged, it shows the student logged at the moment.

Tabs that are only showed when a student is logged in:

- **Log-Out:**
  If you click the button, you log out of the account.

- **Convalidation:**
  If you press the convalidation tab, your last year grades will be convalidated if they pass the requirements. It notifies you if your grades satisfy them or not.
  The requirements for having a convalidation granted is to have more than a 7 in the lab and more than a 3 in the theory. You also can not be part of a validated pair or is the student1 of a pair even if it has not been validated.
  You can not validate your grades if you have a laboratory group neither.

- **Apply Pair:**
  Here you can select a second student to form a pair with.
  You can select as many students as you want but once of the second student you applied for chooses you too (in the same tab of his/her session), the pair will be validated so you could not choose another student and the pair will be that one.

- **Break Pair:**
  Here you can choose the pair you want to break as long as you are not already in a lab group.
  If the pair that asks for it is validated, the two of the students would have to ask for breaking the pair. If not, just one asking for breaking the pair is enough.

- **Apply Group:**
  In this tab you can choose the laboratory group you want to be part of as long as you are part of the theory group with the same constraints. (i.e: you are part of the group 126 so you can only choose 1261, 1262 or 1263).
